Atrial Fibrillation

TOPIC IMAGES (6) UPDATES

Overview and Recommendations

Background

- Atrial fibrillation (AF) is a common supraventricular tachyarrhythmia caused by uncoordinated atrial activation and associated with an irregularly irregular ventricular response.
- Causes of atrial fibrillation include an underlying structural heart disease, metabolic disorders, endocrine diseases, and certain medications.
- The prevalence of AF is approximately 1%-2% in the general population of developed countries.
- Definitions of AF:
 - Paroxysmal AF is recurrent atrial fibrillation that terminates spontaneously, lasting possibly up to 7 days, but usually < 48 hours.
