

EBSCO Discovery Service Health™

Once Again Drives the **Evolution** of Medical Search

Search

Now, when it's needed most, EDS Health brings new advances to medical research libraries

Connecting health professionals to information that helps them make important, life-changing decisions is essential. *EBSCO Discovery Service Health* enables you to create a powerful research experience that returns highly reliable, current, and critical medical research, guideline recommendations, and more.

Key benefits of EDS Health:

- ✓ Search DynaMed™, PubMed, the full CINAHL® product line and content from other leading medical research providers such as BIOSIS, Global Health, and APA PsycInfo in one search.
- ✓ EDS Health is the only discovery service leveraging native MeSH, CINAHL, APA and other thesauri and controlled vocabularies to connect these different terminologies. All headings are hyperlinked for easier serendipitous discovery.
- ✓ The EDS Health index represents a comprehensive collection of more than 3.4 billion records from the world's top publishers and information providers, 5.3 million unique titles indexed, and access to 16,000 databases and packages. Included in the index is a vast quantity of non-journal content as well, such as images, videos, books, systematic reviews, policies & procedures, and reports.
- ✓ Configurable to your environment to allow for the collection of CME credits, a TOC Alerting service, document delivery/ILL, and Ask-A-Librarian feature. Third-party applications are fully supported, such as the Third Iron suite of services, LibGuides, LibChat, LibraryH3lp, RSS Feeds, Google Scholar, and others.
- ✓ APIs allow for full integrations of non-bibliographic content from other vendors' services and resources such as VisualDX, Micromedex, Embase, and more.

Research Success

Finding the right information is critically important — whether it's for patient care or developing medical advances. **EBSCO Discovery Service Health™** points your users to the best research on their topic from your collection faster.

Easy to implement.

Available in 30 languages, EDS Health offers users a modern and responsive **search experience tailored to each hospital.**

Single sign-on integration with **EBSCO SSO, OpenAthens, and Google CASA/UCASA.**

Concept Map visualizations for demonstrating connections between subjects. Users can choose between radial and grid views to suit how they prefer to see information presented.

"Add to Project" feature empowers teams of collaborating physicians to singularly or collectively add new articles, videos, books and citations to dedicated projects.

"Ahead of Print" function enables the reading of articles prior to publication and for citation by way of their Digital Object Identifiers (DOI), which will initially point to the accepted author manuscript, and later to the published version of record.

Quick and easy "Access Now" drop-down options **for immediately accessing full text.**

This method of showing Ahead of Print within the issue tree is better than Clinical Key.

- **Mercy Hospital Network, Missouri**

This is so much better than PubMed.

-**New England College of Optometry**

This is the best issue tree solution I've seen.

- **Houston Methodist Hospital**
