

Five Reasons Why DynaMedex May Be the Clinical Decision Support Tool You Need

DynaMedex™ from EBSCO Information Services (EBSCO) is a clinical decision support (CDS) tool that allows clinicians to ask natural-language questions at the point of care and receive accurate answers and unbiased guidance.

DynaMedex combines the clinical expertise and extensive, curated disease content of DynaMed with the comprehensive drug information from Micromedex.

However some in the medical community harbor misconceptions regarding DynaMedex, based on outdated information they may have heard about the platform's capabilities.

Here, the makers of DynaMedex set the record straight by highlighting five key benefits of this innovative CDS solution.

Five key benefits of DynaMedex

1. The most current clinical information available

The DynaMedex approach to ensuring the highest level of information currency means clinicians never have to wonder if what they're accessing is up to date. This helps clinicians make even better-informed, confident decisions at the point of care.

- The team of clinical experts at DynaMedex:
- Continuously surveys the medical literature for new information
- Updates DynaMedex content as often as 6x a day
- Ensures the most current, evidence-based guidance is available

2. Comprehensive coverage

DynaMedex comprehensively covers **over 35 different medical specialties**. Each specialty is broken down into various topics and subtopics to aid clinicians in accessing information relevant to their needs.

When new topics emerge in the medical literature, DynaMedex integrates the information rapidly and accurately.

3. Progressive disclosure of clinical information

When clinicians are looking for help in making timely clinical decisions, they can rely on DynaMedex to synthesize and surface the evidence they need.

Evidence is presented in an easily digestible bulleted format that DynaMedex calls “progressive disclosure.” Clinicians receive vital information at the point of care quickly and without extraneous details.

DynaMedex also provides one-click access to primary literature so clinicians can get exactly what they need—when, where, and how they need it.

4. Clearly defined content

Expert opinions are clearly defined in DynaMedex and easily distinguished from clinical evidence.

The unique editorial approach of DynaMedex is built on transparency. Content is delineated clearly as:

- Clinical practice points
- DynaMed Commentary
- Evidence Synopsis

Clinicians are never left guessing whether the clinical information they’re accessing is based on opinions or evidence.

5. Reasonable learning curve

As with any new CDS platform or clinical tool, it may take some time for clinician users to become familiar with DynaMedex.

But, this unique solution has been thoughtfully designed **by clinicians for clinicians**. After a little time, using DynaMedex should come easily.

It may feel uncomfortable to change at first, but after just a few uses, clinicians grow to love the DynaMedex Difference!
