

# Five Ways School Administrators Can Support Students and Educators

As key decision makers regarding educational technology in their schools and districts, administrators can ensure the success of their students and teachers by taking the following actions:

## 1 Meet students where they are

Bring the library to where students already are and leverage the search skills they already have by providing easy-to-use, mobile-friendly resources.

## 2 Empower your school librarian

Provide your school librarian with the technology and information resources needed to prepare students for research — in school, in college, and beyond.

## 3 Promote information literacy

Support librarians in teaching students to differentiate trusted sources from those found on the web and to evaluate which resources best support their research objectives.

## 4 Maximize your investment

Purchase a research tool that augments the use of your library's resources, supports school curriculum, integrates information and communication technologies, and improves learning outcomes.

## 5 Encourage lifelong learning

Give students the knowledge and skills they need to compete in a global society.

### How EBSCO can help

Whether you choose *Explora*, EBSCO's research interface for schools, or *EBSCO Discovery Service* to bring all your library's resources into one search, our rich, reliable content and easy-to-use functionality will provide students and educators with the best possible research experience.

Visit [ebsco.com](https://www.ebsco.com) to learn more.
