

Go Beyond the Single Search Box

EBSCO Discovery Service™ (EDS) goes beyond the notion of a “single search” with a platform that supports all content types, features advanced search logic, delivers discovery and holdings management tools, and ensures extensibility with an array of integrations and support for interoperability with the ILS/LSP.

Click an area to explore.

EBSCO Discovery Service API

Interoperability with ILS

EBSCO Discovery Service API

With the EDS API, libraries have access to premium resources provided through EDS, as well as unique features and functionality that provide researchers with a seamless experience.

In addition, libraries can integrate the EDS API within a presentation layer such as VuFind, BlackLight, Encore (III), Enterprise (SirsiDynix), and the Stacks content management system.

This example of the EDS API shows the seamless integration of search results. Users are not taken out of the library experience, but rather remain in a consistent research flow through this integration.

The Late Ottoman Empire and Egypt

Hybridity, law and gender

Book / Shlala, Elizabeth H.

London, England; New York, New York: Routledge, 2018, 1 online resource (142 pages)., English

... and courts of the late **Ottoman empire**. Over time and acting in their own self

...

This example shows the flexibility of the EDS API integrated into the Stacks web platform. The Stacks platform allows you to build a modern library website and EDS can easily integrate into Stacks. EDS results are organized in a bento-style presentation, driving users to popular content items quickly.

Interoperability with ILS

To ensure interoperability, EBSCO has partnered with more than 60 ILS vendors worldwide. For those vendors with which EBSCO does not yet have a formal partnership in place, EBSCO works directly with libraries to implement EDS via open APIs. Examples of ILS interoperability include use of the EDS API within the ILS presentation layer (e.g. OPAC) or the use of the ILS API to enable patron functionality within EDS.

Using the WMS API, real-time availability of physical holdings like books, videos, DVDs, etc. can be displayed in the EDS result list. There is no need to expand a record or look elsewhere to determine a book's availability. EDS uses the API to deliver the current location. It also uses the WMS API to display account status information – such as checkouts, holds and fines – to users who sign in.

With the option of using either EDS or a library's current catalog user interface as the front end, EBSCO's ILS partnerships allow libraries to take advantage of the benefits of both services. Through these partnerships users have exposure to valuable resources, a seamless user experience and easier access to the databases, journals, conference proceedings, magazines, newspapers, e-books, images, videos and other resources their libraries provide.

The screenshot displays the EBSCO Enterprise search interface. At the top, the 'enterprise' logo is on the left, and a navigation bar contains links: Log In, My Account, My Lists, Send a Request, Library Information, Select Language, and accessibility icons. Below this is a search bar with a home icon, a dropdown menu set to 'Everything', another dropdown set to 'All Fields', and a search input field containing 'social media marketing'. To the right of the search bar are buttons for 'SEARCH' and 'Advanced Search'.

Below the search bar is a row of icons representing various resource types: a book, a calendar, a magnifying glass, a person, a globe, a document, a speaker, and a video camera.

The main content area is divided into three sections:

- Left Sidebar:** Titled 'Limit Library Results', it includes buttons for 'Only Show Library Results' and 'Only Show Available'. Below these are expandable filters for Author, Format, Electronic Format, eReader, Vendor, Publication Date, Material Type, Item Category 1, Item Category 2, Language, Library, Shelf Location, and Subject.
- Center:** Displays '1363981 results found' with pagination controls (1, 2, 3, 4, 5, ...). Below this is a 'Select an Action' dropdown and a 'Sort By:' dropdown. A 'Research Starter' section features a thumbnail image of a social media marketing event and a text snippet: 'Social media marketing is a relatively new addition to the integrated marketing communications systems of many public and... More'. Below this, two search results are listed:
 1. **Social Media Marketing for DPMs.** by TERRY, MARK. 2017. Source: Podiatry Management (PODIATRY).
 2. **Social Media Marketing** by Adrian Andrews.
- Right Sidebar:** Titled 'Limit Database Results', it includes a button for 'Only Show Database Results'. Below this are sections for 'Expanded by:' (with checkboxes for 'Apply equivalent subjects' and 'Also search within the full text...') and 'Narrowed by:' (with a checkbox for 'Full Text' and a 'Clear all' button). At the bottom is a list of expandable filters: Database Expanders, Database Limiters, Date Published, Source Type, Limit by Publication, Limit by Publisher, Limit by Language, Limit by Subject, and Limit by Publication Year.

Encore paired with EDS brings users the most comprehensive collection of full-text articles available.
